Precaution for safety

Burning may occur due to putting part of human body or any object into printer as high heat occur during printer operation. Printer should be stopped and cooled in the case of these tasks.

The printer operates moving parts such as motor, belt, gear etc. Injury may occur due to getting trapped in them in the case of putting human body or any object into printer during the operation.

Beware of installation place as children or pet may get injured by the printer. Children or pet around the printer shall be under the care and protection.

Do not heat or deform main material of the printer-Filament, as it may cause fire or injury. User shall be cautious that suffocation may occur in the case of swallowing output or Filament leftover.

The printer uses materials by melting them and may cause unique smell in the process of it. Therefore the printer shall be installed in well ventilated place.

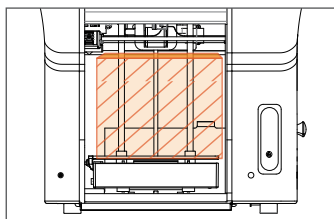

Do not turn off the printer in heat condition of bed or extruder as it may cause printer malfunction or fire due to extreme heat in stopping the cooling fan.

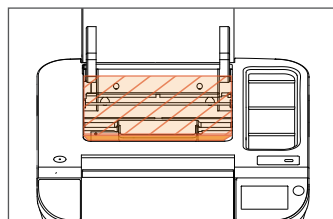

Do not print with unauthorized materials.
Please refer to User Manuals for detail instruction.
